

3.3 V and 2.5 V LVCMOS High-Performance Clock Buffer Family

Check for Samples: [CDCLVC11xx](#)

FEATURES

- High-Performance 1:2, 1:3, 1:4, 1:6, 1:8, 1:10, 1:12 LVCMOS Clock Buffer Family
- Very Low Pin-to-Pin Skew < 50 ps
- Very Low Additive Jitter < 100 fs
- Supply Voltage: 3.3 V or 2.5 V
- $f_{max} = 250$ MHz for 3.3 V
- $f_{max} = 180$ MHz for 2.5 V

- Operating Temperature Range: -40°C to 85°C
- Available in 8-, 14-, 16-, 20-, 24-Pin TSSOP Package (all pin compatible)

DESCRIPTION

The CDCLVC11xx is a modular, high-performance, low-skew, general purpose clock buffer family from Texas Instruments.

The whole family is designed with a modular approach in mind. It is intended to round up TI's series of LVCMOS clock generators.

There are 7 different fan-out variations, 1:2 to 1:12, available. All of the devices are pin compatible to each other for easy handling.

All family members share the same high performing characteristics like low additive jitter, low skew, and wide operating temperature range.

The CDCLVC11xx supports an asynchronous output enable control (1G) which switches the outputs into a low state when 1G is low. Also, versions with synchronized enable control for glitch free switching and three-state outputs are planned in future device options.

The CDCLVC11xx operate in a 2.5 V and 3.3 V environment and are characterized for operation from -40°C to 85°C .

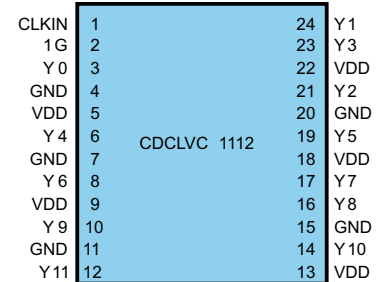

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

(1) All typical values are at respective nominal V_{DD}. For switching characteristics, outputs are terminated to 50 Ω to V_{DD}/2 (see Figure 1).

(2) For dynamic I_{DD} over frequency see Figure 8 and Figure 9.

(3) This is the formula for the power dissipation calculation (see Figure 8 and the Power Consideration section).

$$P_{tot} = P_{stat} + P_{dyn} + P_{Cload} [W]$$

$$P_{stat} = V_{DD} \times I_{DD} [W]$$

$$P_{dyn} = C_{PD} \times V_{DD}^2 \times f [W]$$

$$P_{Cload} = C_{load} \times V_{DD}^2 \times f \times n [W]$$

n = Number of switching output pins

(4) t_{sk(p)} depends on output rise- and fall-time (t_r/t_f). The output duty-cycle can be calculated: odc = (t_{w(OUT)} ± t_{sk(p)})/t_{period}; t_{w(OUT)} is pulse-width of output waveform and t_{period} is 1/f_{OUT}.

TYPICAL CHARACTERISTICS

Power Consideration

The following power consideration refers to the device-consumed power consumption only. The device power consumption is the sum of static power and dynamic power. The dynamic power usage consists of two components:

1. Power used by the device as it switches states.
2. Power required to charge any output load.

The output load can be capacitive only or capacitive and resistive. The following formula and the power graphs in Figure 8 and Figure 9 can be used to obtain the power consumption of the device:

$$P_{dev} = P_{stat} + n (P_{dyn} + P_{Cload})$$

$$P_{stat} = V_{DD} \times I_{DD}$$

$$P_{dyn} + P_{Cload} = \text{see Figure 8 and Figure 9}$$

where:

- V_{DD} = Supply voltage (3.3 V or 2.5 V)
- I_{DD} = Static device current (typ 6 mA for $V_{DD} = 3.3$ V; typ 3 mA for $V_{DD} = 2.5$ V)
- n = Number of switching output pins

Example for Device Power Consumption for CDCLVC1104: 4 outputs are switching, $f = 120$ MHz, $V_{DD} = 3.3$ V and $C_{load} = 2$ pF per output:

$$P_{dev} = P_{stat} + n (P_{dyn} + P_{Cload}) = 19.8 \text{ mW} + 40 \text{ mW} = 59.8 \text{ mW}$$

$$P_{stat} = V_{DD} \times I_{DD} = 6 \text{ mA} \times 3.3 \text{ V} = 19.8 \text{ mW}$$

$$n (P_{dyn} + P_{Cload}) = 4 \times 10 \text{ mW} = 40 \text{ mW}$$

NOTE

For dimensioning the power supply, the total power consumption needs to be considered. The total power consumption is the sum of the device power consumption and the power consumption of the load.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
